

Drip System Checklist & Set Up Requirements

1. Go to <http://drip.realgeeks.com/> . Only Admins have access to the Drip Feature
2. Agree to the Terms of Service and \$50/month fee for this service.
3. If your site is not using the new Real Geeks name servers, you will first see a page requiring you to make this change. You will need to follow the onscreen instructions or video to change to the new name servers. This change may take hours to process, so you may need to come back later. If you do not see this message, it means you are already using the correct name servers.
4. You are now ready to start using Drip. See the Quick Walk-through Video for how-to start nurturing your leads through drip campaigns and eBlasts.
